MEMORANDUM FOR: Chief, Military Division, OCI

ATTENTION: [REDACTED] 25X1A

THROUGH: Chief, Requirements Branch, Reconnaissance Group, CGS

FROM: Chief, CIA/PID (NPIC)

SUBJECT: Negation of Reported Possible Missile Site Near Emba, USSR

REFERENCE: (a) Requirement C-CI-3-80,645  
(b) CIA/PID Project C 1382-63  
(c) OUSARMA, Moscow, No. 2901016363 (26 Aug 63)

1. This memorandum is in response to your above referenced requirement dated 3 October 1963 requesting a search of relevant photography to locate and determine the function of a facility reported in Reference (c) as a possible missile launching pad. This facility was observed in [REDACTED] and reported to be about 25 miles northwest of Chelkar. It was described as a "double rail spur leading to a large heart-shaped possible missile launching pad, about 5 miles southeast of a small town on railway running northwest/southeast with four or five large white buildings on northeast side of railway."

25X1D

25X1D 2. The latest available photography of this area is KEYHOLE [REDACTED] 25X1D [REDACTED] Although the observer sighted the reported facility in [REDACTED] he was probably describing construction activity associated with the proposed 1,200 mile long Bukhara-Urals 40-inch gas pipeline which is currently under construction in this area. The "small town on the railway running northwest/southeast" is doubtless Solenaya (48-01N 59-11E), which is 25 miles northwest of Chelkar. The large gas pipeline under construction crosses the railway at Solenaya and extends for several miles both north and south of Solenaya. Five miles south of Solenaya, along the route of the pipeline, is a large "heart-shaped" clearing, probably the site of a construction camp or supply dump, or possibly the site of a future pumping station. In any case, the clearing appears associated with the gas pipeline construction and bears no resemblance to clearings and activity normally associated with missile site construction. There is no photographic evidence of any rail spurs leaving the main railroad within a ten mile radius of Solenaya. The "four or five large white buildings on the northeast side of the railway" are observed at Solenaya and probably are warehouses. Considerable new construction activity is apparent at Solenaya. Since this is

the nearest rail connection to 300-400 miles of the proposed gas pipeline route, possibly a major supply base is being established here for the gas pipeline construction.
